

Mont Cervin

Description

Often described as a mountain straight out of a fantasy book, le Mont Cervin, also called Matterhorn, is the 12th highest peak in Western Europe and the 10th highest in Switzerland, topping at 4,478 meters. The mountain started its formation 100 million years ago when continental plates collided into each other, causing the ground to rise and giving the peak its unique shape. In fact, its picture may be familiar as the mountain gave its image to the famous Toblerone logo.
